

***APPENDIX G***

***INSTALLATION***

Execution of the Bear River Model requires Microsoft 7 Excel to be installed on the computer.

The Bear River Model is provided in a compressed format. To decompress the file:

1. Create or select a folder where you wish the files to reside on your hard drive;
2. Copy the executable file *ABear Setup.exe* to the folder;
3. Double click on the file from Windows Explorer. *ABear Setup* will then extract the files necessary to run the model and place them in the selected folder; and
4. *ABear Setup* will install four files:

**Bear River Model.xls:**

This Excel workbook serves as a Graphical User's Interface (GUI) to the model. This workbook facilitates selection of the appropriate model (Dry, Normal, or Wet year condition), provides a brief tutorial, and documents the version of the model.

**Bear Dry Year Model.xls**

This Excel workbook comprises the Dry Year Model. It can be used in a *stand alone* mode by opening it directly from Excel (i.e., it does not have to be accessed from the GUI).

**Bear Normal Year Model.xls**

This Excel workbook comprises the Normal Year Model. It can be used in a *stand alone* mode by opening it directly from Excel (i.e., it does not have to be accessed from the GUI).

**Bear Wet Year Model.xls**

This Excel workbook comprises the Wet Year Model. It can be used in a *stand alone* mode by opening it directly from Excel (i.e., it does not have to be accessed from the GUI).
